# REISSUE APPLICATION: DECLARATION BY THE INVENTOR

Docket Number (Optional)

18602-06614 (P1450R1)

As a below named inventor, I hereby declare that:

My residence, mailing address and citizenship are stated below next to my name.

I believe I am the original, first and sole inventor (if only one name is listed below) or an original, first and joint inventor (if plural names are listed below) of the subject matter which is described and claimed in patent number 6,011,585, granted January 4, 2000, and for which a reissue patent is sought on the invention entitled APPARATUS AND METHOD FOR ROTATING THE DISPLAY ORIENTATION OF A CAPTURED IMAGE the specification of which

☐

is attached hereto.

☒

was filed on January 4, 2002 as reissue application number 10/040,249 and was amended on January 4, 2002 via Preliminary Amendment (If applicable)

I have reviewed and understand the contents of the above-identified specification, including the claims, as amended by any amendment referred to above.

I acknowledge the duty to disclose information which is material to patentability as defined in 37 CFR 1.56.

I verily believe the original patent to be wholly or partly inoperative or invalid, for the reasons described below. (Check all boxes that apply.)

☐

by reason of a defective specification or drawing.

☒

by reason of the patentee claiming more or less than he had the right to claim in the patent.

☐

by reason of other errors.

At least one error upon which reissue is based is described below. If the reissue is a broadening reissue, such must be stated with an explanation as to the nature of the broadening:

**This is a broadening reissue to remove limitations in the claims as issued, by which limitations the patentee claimed less than it had the right to claim in the patent. At least one error being relied upon as the basis for reissue is the inclusion of the limitation in claim 1 pertaining to an image processing unit processing an i-by-j array of captured image data and an image sensor generating an i+1-by-j+1 array of image data, or an image capture unit generating an additional row and column of pixels for the captured image data from the image sensor.**
